OUR MISSION

Network for Inclusive Development in Sahel (NIDIS) is dedicated to fostering sustainable development across the Sahel region, with a focus on advancing the United Nations' Sustainable Development Goals (SDGs).

Since its inception in 2018, initially operating through volunteer efforts, NIDIS evolved into a full-fledged organization in 2020. Since its establishment NIDIS has helped hundreds of thousands of people through a variety of efforts. With a multifaceted approach, NIDIS tackles various critical issues plaguing the Sahel region, including development, humanitarian aid, food security, and access to clean water. Through collaborative initiatives and community-driven projects, NIDIS strives to empower local communities, promote economic growth, and enhance resilience against environmental challenges. NIDIS prioritizes its efforts towards the most vulnerable communities within the Sahel region, ensuring that their voices are heard, and their needs are met. By addressing these fundamental needs and promoting inclusivity, NIDIS strives to create lasting positive change in the Sahel region, fostering a future of prosperity and well-being for all its inhabitants.

SAHEL REGION NEEDS HELP

The Sahel region of Africa is currently facing a complex humanitarian crisis due to a combination of factors such as armed conflict, poverty, climate change, food insecurity, and political instability. This crisis has resulted in over 10 million children in urgent need of humanitarian aid in this region alone. The situation is particularly dire in countries like Burkina Faso, Mali, and Niger, where millions of people are impacted by severe humanitarian and protection crises.

One of the main contributors to this crisis is climate change, which significantly impacts the Sahel region, exacerbating existing challenges and contributing to the severity of the humanitarian situation. Rising temperatures, more frequent extreme weather events, and prolonged droughts have intensified the scarcity of water resources, leading to challenges in livelihoods, agriculture, and industry. The degradation of soil due to improper land use and prolonged droughts has made farming increasingly difficult, contributing to food insecurity.

WHAT SETS US APART

NIDIS stands out among NGOs in Africa for its unique approach to community development and its unwavering focus to help vulnerable populations. What sets NIDIS apart is not only its commitment to making a difference but also its innovative strategies and dedicated team of young individuals aged 18 to 28.

Unlike other organizations, NIDIS harnesses the power of volunteers in the villages to mitigate costs, ensuring that donations directly impact those in need. Moreover, NIDIS doesn't just provide immediate aid; it invests time and effort into setting up communities for long-term success. Before implementing projects like solar-powered water systems or agricultural initiatives, NIDIS conducts extensive groundwork, ensuring that communities are prepared for sustainable change. NIDIS doesn't simply alleviate immediate hardships; it takes communities from struggling, to surviving, to prospering in a few years through a combination of initiatives.

But what truly sets NIDIS apart is its deep connection with the communities it serves. NIDIS staff and volunteers have close ties to the communities they assist, either living or hailing from these areas, fostering a strong bond and understanding the local needs. This firsthand knowledge allows NIDIS to tailor its projects effectively, ensuring maximum impact.

PREVIOUS PROJECT HIGHLIGHT

Solar-Powered Water Program in Rural Mali

Through our initiative aimed at addressing the critical need for clean water access in rural Mali, we have successfully implemented solar energy-powered water pumps in several villages, alongside the installation of wells and water towers.

These solar-powered pumps significantly alleviate the burden on rural communities by providing immediate access to clean water. Utilizing the energy harnessed from solar panels, these pumps efficiently draw water for elevated tanks.

The United Nations Food and Agriculture Organization recognizes the immense potential of solar energy irrigation in enhancing agricultural productivity and mitigating water scarcity challenges. With solar panels proving to be cost-effective for hydraulic volumes up to 3,000 cubic meters per day, and boasting a lifespan of around 25 years, and endorsed by the UN for their efficacy, our solar water pumping systems are both financially viable and environmentally sustainable.

PREVIOUS PROJECT HIGHLIGHT

Empowering Women through Agricultural Development

Building on our successful solar-powered water program in rural Mali, we've launched the next phase of our initiative; empowering women to cultivate land for sustainable livelihoods through agriculture.

By providing agricultural seeds to women and utilizing the clean water made available through our solar-powered water pumps, our initiative empowers women to kickstart farming projects and transform previously unusable land into productive agricultural plots. Through education and capacity-building, we teach common farming practices and sustainable agricultural techniques, such as proper irrigation methods and soil management. This ensures economic empowerment, food security, and surplus crop generation for their families and communities.

WHY WE NEED YOUR SUPPORT

Plans For the Future

Water Project Expansion: We are extending our reach to new communities, aiming to implement large-scale solar-powered water towers in desperate areas. These projects will provide access to clean water for over 10,000 individuals, addressing water scarcity and facilitating agricultural needs.

Reproductive Health Initiative: Recognizing the importance of reproductive health in empowering women, we are launching a comprehensive initiative. This program focuses on providing reproductive aid, offering education on safe sex practices, and promoting overall reproductive well-being.

International Engagement: We are establishing an international presence by connecting with new partners across the globe. Through collaboration and partnerships, we aim to amplify our impact and reach more communities in need.

Educational Workshops: We are investing in the future generation by conducting workshops in schools. These workshops focus on renewable energy education, inspiring children to become future leaders and change-makers in their communities.

Your Benefits

Global Recognition: Showcase commitment at global events like COP, boosting visibility.

Customized Partnership: Tailor packages to fit corporate values, maximizing impact.

Positive Public Image: Align with social responsibility, building trust among stakeholders.

Impact Measurement: Track outcomes of your sponsorship investment.

Contact Us

If you or your organization would like to support the growth of NIDIS, or if you have any questions or suggestions, please feel free to contact us! In addition to financial support, we are continuously seeking technical support and mentorship from industry professionals - if you would like to donate your time and share your expertise with our group, please get in touch!
